Dear Jury of the DAC Young Fellows Program 2023,

I am pleased to offer a recommendation for Shuhan Bai, an excellent student and candidate for the DAC Young Fellows Program 2023. She is well-prepared to enrich herself in this program, having a strong academic record, excellent skills working in a team, and a fine character. In a nutshell:

- She is a dedicated, motivated, and conscientious student, and I consider her most prominent merit is her outstanding learning capacity. During her doctoral period, she solidly mastered the basic knowledge, all kinds of experimental skills, academic writing and scientific research methods.
- She has extremely strong executive force and can sacrifice much to accomplish her purpose. I am really impressed by her tremendous progress in academic research. She used to publish a conference paper at the 59th Design Automation Conference but could only participate online unfortunately due to the epidemic, where she showed great enthusiasm to discuss with other researchers.
- She has experiences of working collaboratively in research groups. Her team members reported that "she always works hard on group projects and helps team members with the given task." These comments also highlight her strong work ethic and interpersonal skills.

I have absolutely no reservations about offering the highest recommendation for Shuhan Bai. She shows a great deal of promise and will make an excellent addition to the DAC Young Fellows Program 2023. Please feel free to contact me to discuss her qualifications further.

Sincerely yours,

XUE Chun Jason
